

TREATMENT OF ACUTE IRRITATED SKIN WITH PELSAN+ SKIN CREAM.

t=0

01-04

Adult male presented irritated and itchy area of skin on the left hand after physical stress of the epidermis.

No allergies or medical conditions are known. A small amount of Pelsan+ was applied immediately after this picture was made.

Goal of treatment: reduce redness and irritation.

Pictures were taken in a controlled environment.

t=1 hour

01-04

Skin condition improved significantly within 1 hour: redness was reduced drastically and the skin was no longer itchy. Prolonged treatment with Pelsan+ was not necessary. Pictures of the remaining process could not be made under the same controlled light environment. Redness of the skin was gone the same day.

Product used:

Pelsan+ Skin cream
(tube 30g, PPP30)
